

The energy used to make one brick is enough to brew two pints of beer. The UK throws away two million bricks a year.

That's a monster of a hangover.

The construction industry in the UK produces over 90 million tonnes of waste every year. That's enough to fill the Albert Hall every five hours.

There is enough leftover paint in the UK each year to fill 50 olympic sized swimming pools.

A colourful twist to London 2012.

Ok, so we all know that we need to start changing our attitude towards the environment, and are constantly being bombarded with words like 'eco-friendly' and 'global warming'. You don't have to be a sandal wearing, tree hugging eco-warrior to care about green issues. In fact, a 2007 survey shows that 86% of people in the UK worry about the environment.

DERFA figures show that the construction industry is responsible for 20% of UK waste, the equivalent of 90 million tonnes. BuilderScrap aims to reduce this by encouraging a culture of reuse and of diverting tonnage from landfill.

BuilderScrap is a **completely free** website designed to help the construction industry reduce its impact on the environment. By uploading surplus, unused materials, as well as good quality second hand goods to the website (either for a cost or for free), you can save money on skips and landfill tax and do your bit for the environment at the same time.

As well as getting rid of goods, you can use BuilderScrap to find cheaper, greener supplies in your area. What have you got to lose?

Benefits include:

- **Cost savings – lower disposal charges (fewer skips, landfill tax and labour)**
- **Cost savings – reduces the need to buy new material**
- **Help save the environment – less waste sent to landfill, lower carbon emissions**
- **Potential revenue generation from sale of goods**
- **Improved company perception and standing**
- **Be part of a dynamic new brand encouraging the trade to think and act differently**
